

CASCADING STYLE SHEETS

CREATE THE FOLLOWING PROJECT - DO NOT FORGET TO PUT EVERYTHING ORGANISED IN A FOLDER! ONCE YOU ARE DONE, COMPRESS THE FOLDER (1 FOLDER) AND UPLOAD IT.

1. **ONE PAGE WEBSITE:** Create a one page website using HTML, CSS and if needed JS as well. *You must know all the code you are using in your files (which means, be aware of what you are doing).*

- Start your website with a header (100% wide), with inside a nav (100% wide) with inside your **fully responsive** menu (add 4 menu items). 20%
- Add a slideshow to your website using the example we did in the class. Align your slide show in the middle of the screen and customise some parts of it (for example, change the arrows). Add some meaningful images. 15%
- Write three articles and put each of them in a box. Boxes must be on the same line, with the same amount of space around. 10%
- Your website must be fully responsive. Align elements properly when the screen size changes. **Use the inspector!!!** 20%
- Add a footer at the end, and align vertically and horizontally social media icons (Facebook, Instagram, Twitter..) and the text “© 2019 all rights reserved.”.

Text and icons **must be** in two different lines - not side by side. *(do NOT use the character © as it is - you will loose point if you do that! Look for the correct HTML entity).* 10%

- Use a favicon, logo and google fonts on your webpage. 10%
- Organise your files correctly in corresponding folders, prefix CSS, format and validate your HTML. Keep your code simple. 15%

The topic of the website is *Native Americans*. Look online for the tribes and choose one. Populate the website with content about it.

Good luck!
